

Video Streaming Test

2026-02-20-01:57:43

Objective

The Candela Video streaming test is designed to measure the access point performance and stability by streaming the videos from the local browser or from over the Internet in real clients like android which are connected to the access point. This test allows the user to choose the options like video link, type of media source, media quality, number of playbacks. Along with the performance other measurements like No of Buffers, Wait-Time, per client Video Bitrate, Video Quality, and more. The expected behavior is for the DUT to be able to handle several stations (within the limitations of the AP specs) and make sure all capable clients can browse the video.

Input Parameters

Test Setup Information	Testname	SVST1
	Device List	ONEPLUS_11R (Android),Red_Magic (Android)
	No of Devices	Total(2): Android(2)
	Incremental Values	No Incremental Value provided
	URL	dash.akamaized.net/akamai/bbb_30fps/bbb_30fps.mpd
	Media Source	1
	Media Quality	0
	Robot Ip	192.168.204.66
	Coordinates	['10', '6', '29']
