

Video Streaming Test

2025-09-04-21:58:42

Objective

The Candela Video streaming test is designed to measure the access point performance and stability by streaming the videos from the local browser from over the Internet in real clients like android which are connected to the access point, this test allows the user to choose the options like video link, type of media source, media quality, number of playbacks. Along with the performance other measurements like No of Buffers, Wait-Time, per client Video Bitrate, Video Quality, and more. The expected behavior is for the DUT to be able to handle several stations (within the limitations of the AP specs) and make sure all capable clients can browse the video.

Input Parameters

Test Setup Information	Testname	video_streaming_test
	Device List	Samsung_M05 (Android),Honor_PAD_X8a (Android),iQOO_Z9_Lite_5G (Android),Oppo3x (Android),Samsung_M14 (Android),Oppo_A3X (Android),itel_P55_5G (Android),Samsung_TAB_s9_ (Android),smarttv (Android),Lenovo_TAB_M10 (Android)
	No of Devices	Total(10): Android(10)
	Incremental Values	10
	URL	https://dash.akamaized.net/akamai/bbb_30fps/bbb_30fps.mpd
	Media Source	DASH
	Media Quality	4k
	Total Duration (min)	1

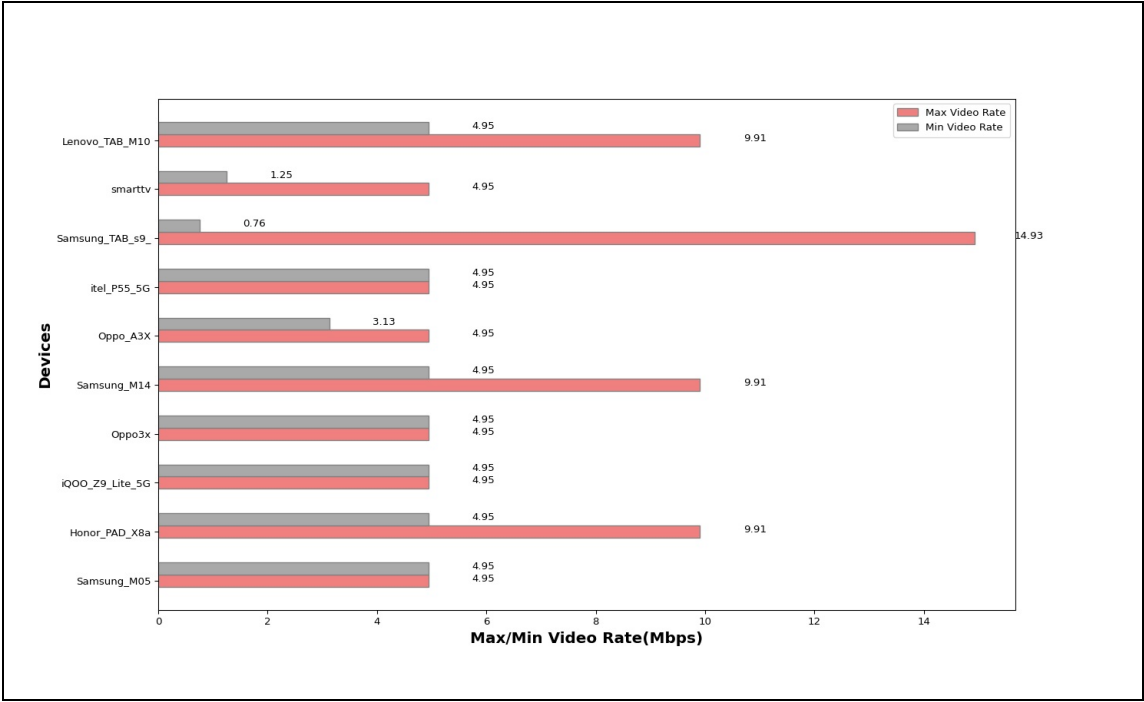

Realtime Video Rate: Number of devices running: 10

Total Urls Per Device

Max/Min Video Rate Per Device

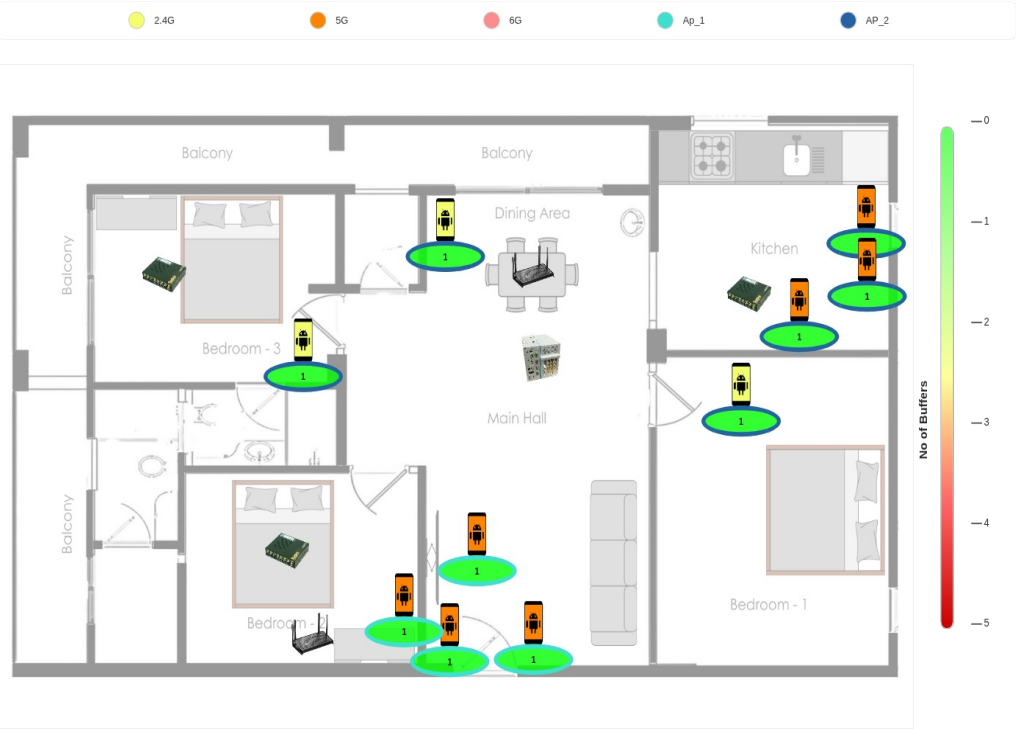

Wait Time Per Device

No of Buffers and Wait Time %
