

Android Hotspot Automation Test

2025-07-24-05-13-10

Objective

The objective of the Android Hotspot automation test is to validate the functionality, reliability, and performance of Android devices operating as Soft Access Points (Soft APs). By automating hotspot enable/disable operations, client association, and traffic generation over multiple iterations, this test aims to assess the ability of these Soft APs to support concurrent virtual station connections, sustain traffic loads, and maintain stable performance.

Test Configuration	Test name	Android Hotspot automation test
	SSID	OnePlus8T,OnePlus11
	Test Duration	60 sec
	Test Delay	10 sec
	Security	wpa2,wpa2
	Number of Iterations	50
	Traffic Direction	bidirectional
	Download Rate	10 Mbps
	Upload Rate	10 Mbps
	TOS	BE
	Maximum Clients for each device	OnePlus8T (10), OnePlus11 (10)

Hotspot Iteration Summary

Iteration	Soft AP (SAP) Device	Hotspot Status	Number of Clients Connected	Traffic Status	Overall Status
1	Oneplus8T	Enabled	10	Executed	PASS
1	CPH2447	Enabled	10	Executed	PASS
2	Oneplus8T	Enabled	10	Executed	PASS
2	CPH2447	Enabled	10	Executed	PASS
