

# TR-398 Issue 4

## WiFi Performance Test Plan

Sun Dec 15 08:56:23 PST 2024

Test Setup Information	
Device Under Test	TR398 AP
Operator	Ben Greear
Estimated Run Time	3.2 h
Actual Run Time	3.112 h

## Objective

The TR-398 Issue 4 WiFi Performance test plan by the Broadband forum provides a comprehensive set of tests to qualify the performance of WiFi access points (APs) designed for residential and small office environments. Radio performance, Throughput, Connection Stability, Airtime Fairness, AP Co-existence, Mu\_MIMO Performance, Spatial Consistency, Long-term Stability and Mesh performance are some of the test areas covered in this test plan. The test plan is designed for service providers deploying in home WiFi APs to qualify the APs in the lab before deployment and for equipment makers to test during the development of the APs. Candela Technologies offers a fully automated TR-398 test system. The user can select from the list of tests available. Most tests can run fully automated, though some require user interaction. Measurements are made and compared to the specified PASS/FAIL criteria in the TR-398 test plan and this report will show the summary PASS/FAIL results followed by more detailed results for each test.

## Summary Results

Test	Result	Candela Score	Elapsed	Info
				Total CX Passing Throughput: 1276 / 1368 93.275%
				Total CX Passing Latency: 885 / 1368 64.693%
				CX Passing Latency N 2.4GHz: 118 / 171 69.006%
				CX Passing Latency AC 5GHz: 156 / 171 91.228%
				CX Passing Latency AX 2.4GHz: 91 / 171 53.216%
				CX Passing Latency AX 5GHz: 92 / 171 53.801%
				CX Passing Latency AX 6GHz-160: 133 / 171 77.778%
				CX Passing Latency BE 2.4GHz: 89 / 171 52.047%
				CX Passing Latency BE 5GHz: 150 / 171 87.719%

## 6.2.6 Latency Test

### Summary

The Latency test intends to verify latency under low, high, and maximum AP traffic load, with 1 and 32 stations. Traffic load is 4 bi-directional TCP streams for each station, plus a low speed UDP connection to probe latency.

## Test Procedure

DUT should be configured for 20Mhz on 2.4GHz, 80Mhz on 5GHz, and 160Mhz on 6GHz and stations should use two spatial streams. Ensure clocks between Eth and Sta devices are synchronized to within 5ms of each other. Standard NTP protocol should achieve this.

1. For each combination of: 2.4GHz N, 5GHz AC, 2.4GHz AX, 5GHz AX, 6GHz AX:
2. Configure attenuators to emulate 2-meter distance between stations and AP.
3. Create 32 stations and allow one to associate with the DUT. The other 31 are admin-down.
4. Create AP to Station (download) TCP stream, and run for 120 seconds, record throughput as 'maximum\_load'. Stop this connection.
5. Calculate offered\_load as 1% of maximum\_load.
6. Create 4 TCP streams on each active station, each configured for Upload and Download rate of offered\_load / (4 \* active\_station\_count \* 2).
7. Create 1 UDP stream on each active station, configured for 56kbps traffic Upload and 56kbps traffic Download.
8. Start all TCP and UDP connections. Wait 30 seconds to let traffic settle.
9. Every 10 seconds for 120 seconds, record one-way downloadlatency over the last 10 seconds for each UDP connection. Depending on test equipment features, this may mean you need to start/stop the UDP every 10 seconds or clear the UDP connection counters.
10. Calculate offered\_load as 70% of maximum\_load, and repeat steps 6 - 9 inclusive.
11. Calculate offered\_load as 125% of maximum\_load, and repeat steps 6 - 9 inclusive.
12. Allow the other 31 stations to associate, and repeat steps 5 - 11 inclusive with all 32 stations active.

## Pass/Fail Criteria

1. For each test configuration running at 1% of maximum load, 1 station: Average of all UDP latency samples must be less than 15ms.
2. For each test configuration running at 1% of maximum load, 32 stations: Average of all UDP latency samples must be less than 25ms.
3. For each test configuration running at 70% of maximum load, 1 station: Average of all UDP latency samples must be less than 25ms.
4. For each test configuration running at 70% of maximum load, 32 stations: Average of all UDP latency samples must be less than 150ms.
5. For each test configuration running at 125% of maximum load, 1 station: Average of all UDP latency samples must be less than 55ms.
6. For each test configuration running at 125% of maximum load, 32 stations: Average of all UDP latency samples must be less than 250ms.
7. For each test configuration: Each UDP connection upload throughput must be at least 1/2 of requested UDP speed for final 10-second test interval.
8. For each test configuration: Each UDP connection download throughput must be at least 1/2 of requested UDP speed for final 10-second test interval.

## Candela Score

The Candela Score for Latency Test is calculated as the sum of:

1. 0.50 multiplied by the percentage of individual UDP connections that passed the pass/fail latency threshold.
2. 0.50 multiplied by the percentage of individual UDP connections that passed the pass/fail throughput threshold.

Distribution of latency values for UDP connections.

Latency readings are clamped to a [-1, 10] second range.

Distribution of latency values for UDP connections.

Latency readings are clamped to a [-1, 10] second range.

Distribution of latency values for UDP connections.

Latency readings are clamped to a [-1, 10] second range.

Distribution of latency values for UDP connections.

Latency readings are clamped to a [-1, 10] second range.

Distribution of latency values for UDP connections.  
 Latency readings are clamped to a [-1, 10] second range.

Distribution of latency values for UDP connections.

Latency readings are clamped to a [-1, 10] second range.

Distribution of latency values for UDP connections.

Latency readings are clamped to a [-1, 10] second range.

Distribution of latency values for UDP connections.

Latency readings are clamped to a [-1, 10] second range.

Distribution of latency values for UDP connections.

Latency readings are clamped to a [-1, 10] second range.

Distribution of latency values for UDP connections.  
 Latency readings are clamped to a [-1, 10] second range.

Distribution of latency values for UDP connections.

Latency readings are clamped to a [-1, 10] second range.

Distribution of latency values for UDP connections.

Latency readings are clamped to a [-1, 10] second range.

Distribution of latency values for UDP connections.

Latency readings are clamped to a [-1, 10] second range.

Distribution of latency values for UDP connections.

Latency readings are clamped to a [-1, 10] second range.

Distribution of latency values for UDP connections.  
 Latency readings are clamped to a [-1, 10] second range.

-----------------------------	-------------	-------------	-----	-----	---	---	---	---	---	---	---

Distribution of latency values for UDP connections.  
Latency readings are clamped to a [-1, 10] second range.

Distribution of latency values for UDP connections.

Latency readings are clamped to a [-1, 10] second range.

Distribution of latency values for UDP connections.

Latency readings are clamped to a [-1, 10] second range.

Distribution of latency values for UDP connections.

Latency readings are clamped to a [-1, 10] second range.

Distribution of latency values for UDP connections.

Latency readings are clamped to a [-1, 10] second range.

Distribution of latency values for UDP connections.

Latency readings are clamped to a [-1, 10] second range.

[CSV Data for One-Way Latency Probability Density Curve, per Connection BE 2.4Ghz Sta-Count 32 Speed 70%](#)

## CSV Data for One-Way Latency Cumulative Density Curve, per Connection BE 2.4Ghz Sta-Count 32 Speed 70%

Collected CSV Data: CSV: 6.2.6 Latency Test BE 2.4Ghz Sta-Count 32 Speed 70%

**BE 2.4Ghz Sta-Count 32 Speed 70% Snapshot**

Distribution of latency values for UDP connections.

Latency readings are clamped to a [-1, 10] second range.

Distribution of latency values for UDP connections.

Latency readings are clamped to a [-1, 10] second range.

Distribution of latency values for UDP connections.

Latency readings are clamped to a [-1, 10] second range.

Distribution of latency values for UDP connections.

Latency readings are clamped to a [-1, 10] second range.

Distribution of latency values for UDP connections.

Latency readings are clamped to a [-1, 10] second range.
