

# Roam Test Report

2024-09-30-23-01-51

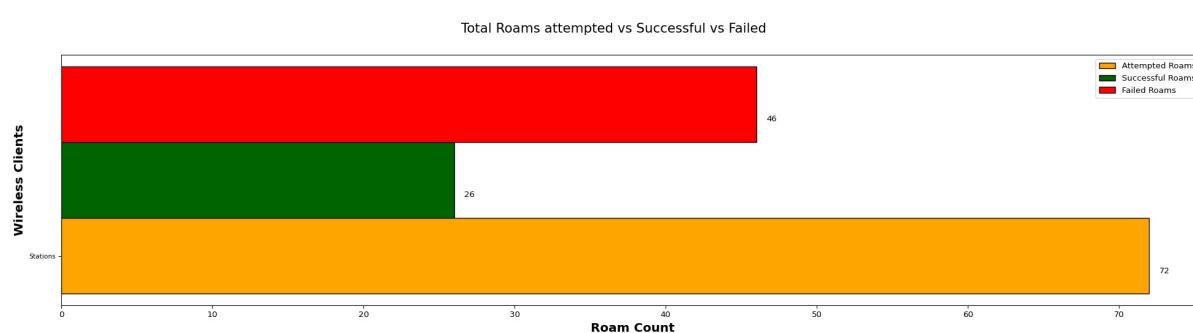

Test Setup Information	SSID	TEST CONFIGURED
	Security	TEST CONFIGURED
	Sniffer Radio	wiphy0
	Iterations	1
	No of Roams	2
	No of Devices	36 (A:26, W:5, L:4, M:1)

## Objective

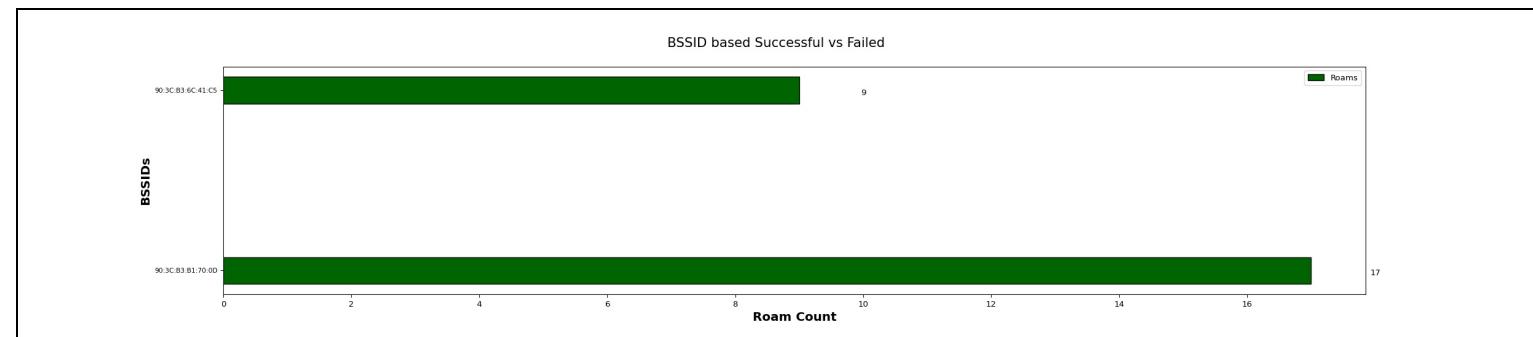

The Candela Roam test uses the forced roam method to create and roam hundreds of WiFi stations between two or more APs with the same SSID or the same channel of different channels. The user can run thousands of roams over long durations and the test measures roaming delay for each roam, station connection times, network down time, packet loss etc.. The user can run this test using different security methods and compare the roaming performance. The expected behavior is the roaming delay should be 50msecs or less for all various kinds of fast roaming methods to avoid any form of service interruption to real-time delay sensitive applications.

## Total Roams attempted vs Successful vs Failed

Total Attempted Roams	Total Successful Roams	Total Failed Roams
72	26	46

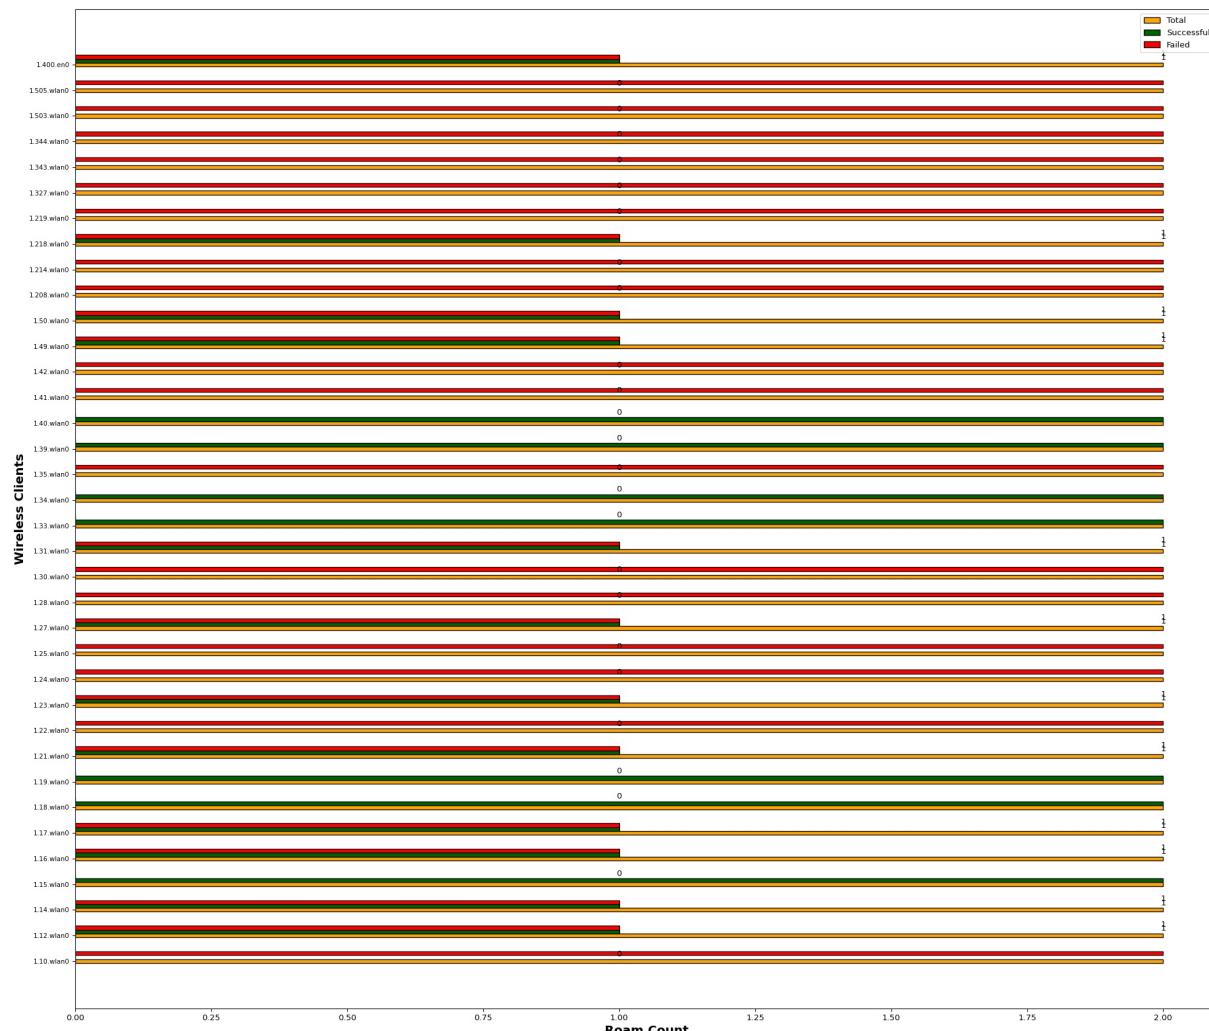

## BSSID based Successful vs Failed

BSSID	Successful Roams
90:3C:B3:B1:70:0D	17
90:3C:B3:6C:41:C5	9

# Station based Successful vs Failed

Station based Successful vs Failed

Device	OS	MAC	Signal Strength (dBm)	Attempted Roams	Successful Roams	Failed Roams
Oneplus devices	Android	2a:b0:56:3a:91:39	-46	2	0	2
samsunggggg	Android	70:5a:ac:72:63:37	-45	2	1	1
